Cleveland Clinic Children's
Hospital for Rehabilitation

2025 Vital Statistics

185
Children admitted for rehab

Cleveland Clinic Children's Hospital for Rehabilitation is a pediatric specialty hospital accepting children with complex medical needs. It is one of only a few freestanding U.S. pediatric specialty hospitals and is accredited by the Commission on Accreditation of Rehabilitation Facilities (CARF).

268
Children admitted for pain rehab

Children were admitted to Cleveland Clinic Children's Pediatric Pain Rehabilitation Program accredited by CARF. This program is recognized as a Center of Excellence by the American Pain Society.

1,939
Integrative medicine visits

Cleveland Clinic Children's Center for Pediatric Integrative Medicine is dedicated to addressing the increasing demand for integrative healthcare. Cleveland Clinic Children's experts research and provide access to practices that address the physical as well as lifestyle, emotional and spiritual needs of children.

94
Average number of students at Lerner School for Autism

Cleveland Clinic Children's Center for Autism is a leading program dedicated to autism treatment, education and research. It includes the Lerner School for Autism and center-based outpatient services such as diagnostic evaluations, speech/language and applied behavioral analysis therapies (behavior therapy). The center provides services from the earliest age of diagnosis through 21 years of age. A number of federally funded clinical research studies are also underway.

135,190
Outpatient therapy treatments

Physical, occupational and speech/language therapists serve infants and children through age 21 at six different locations. Recreational, art and music therapists and adaptive equipment specialists are also available to provide support. Physical, occupational and speech/language therapists serve infants and children through age 21, with assistance from recreational, art and music therapists and adaptive equipment specialists. Cleveland Clinic Children's therapists treat the most complex conditions in specialized clinics, focusing on constraint-induced movement therapy, feeding disorders, seating and wheelchair therapy, and upper extremity disorders.

2,291
Treatments in the Feeding Disorder Program

Feeding disorders develop from a combination of medical/physiological, developmental, behavioral and psychosocial factors. As many as 25% of children experience some type of feeding difficulty during infancy or early childhood. The incidence can be as high as 33% for children with developmental disabilities.

558
Patient visits to the Day Therapy Program

The Day Therapy Program at Cleveland Clinic Children's Hospital for Rehabilitation offers intensive therapy without requiring an overnight stay. Children receive a combination of medical, nursing and therapy services during the day, and return home each evening and weekend.

583
Patient visits to the Mobility and Seating Clinic

The Mobility and Seating Clinic focuses on mobility solutions for infants, children, adolescents and young adults. A variety of options are explored to help those with mobility challenges get moving to explore, learn and participate.

25,609
ABA treatment visits

Individualized applied behavioral analysis (ABA) treatment is provided to children with autism spectrum disorder. A board-certified behavior analyst designs and supervises treatment goals and oversees registered behavior technicians in working directly with patients and families.
